The Balanced to Single Ended Converter (Bal/SE) properly converts your balanced output device to a single ended output for use with single ended input amps or other devices. The use of a four layer board with proper ground plane design minimizes signal loss and distortion, and high quality op amps ensure the most transparent reproduction. An input impedance of 10k ohms and the ability to drive loads down to 600 ohms results in compatibility with a wide range of devices.

Data Sheets
Operational Amplifier: LME49990
Susumu RG Series Thin Film Resistors
Yuden Multilayer Ceramic Capacitors
Polymer Capacitors: Nichicon R7 Series
